

1 **ABSTRACT OF THE DISCLOSURE**

2 An optical fiber connection module includes a connection tube, a sleeve made
3 by electrocast being securely received in the connection tube, an assembly tube joined
4 with the connection tube at a flange and an optical fiber module securely received in the
5 assembly tube and being coaxial with the sleeve. With the electrocast made sleeve and
6 the coaxial relationship between the optical fiber module and the sleeve, the signal
7 transmission accuracy is upgraded.
